

THIS WEEK'S GATES

GAZBOT V7 · MNQ-only paper tournament · 6 live gates · 3 trend / 3 fader · first-to-fire, one netted account

Mon 27 Jul 2026
the live roster & how each earns

GATE	TYPE	HOW IT WORKS	WHAT TRIGGERS IT	FILTERS (ANTI-BLEED)	TESTED P&L (~1 WK)
grind_long	Trend momentum	Rides an established up-trend and lets it run — the desk's big-trend-day workhorse.	Fast VWAP up-slope (≥ 0.4) + price extension in band + net-buy tape flow.	ATR ≥ 24 (big-range trend days only) + tape-flow gate; ER floor dropped. Exit: pure-6.0 chandelier.	+\$747 best wk, chandelier ¹
capitulation_long	Fader reversal	Buys a selling flush — but only once buyers actually step back in.	Sell-climax (climax 2.5 / dom 0.6) then a buy-flip .	require_flip (wait for the flip = the edge) + ATR ≥ 10 ; router benches it on a proven down-trend.	+\$683 3-wk rehab
abs_veto_long	Trend thrust	Enters a bullish breakout only if the burst actually persists (fakeout filter).	Up-thrust (thr 1.5) then 55 s with no absorption against it .	55 s absorption-veto + ER ≥ 0.20 chop-floor + ER-hold.	+\$488 last wk, ½-size ²
rgv_short	Fader reversal	Fades an upward pop back down (reversal-grab).	Reversal-grab short signal, fast-turn off .	ATR ≥ 20 (turning fast-turn off kills the noise trades); router benches it on a proven up-trend.	+\$778 3-wk, robust
exhaustion_short	Fader absorption	Shorts heavy buy-flow that failed to move price — absorbed at a wall, a stalled push.	Big net-buy flow + tiny price move into the ask wall.	Fixed 8 pt stop / 12 pt target (tight, matched to the snap-back); give-back off.	+\$683 3-wk, down-wk green
abs_veto_short	Trend thrust	Mirror of abs_veto_long on the downside — a bear breakout that persists.	Down-thrust then 55 s no-absorption confirm .	55 s absorption-veto + ATR ≥ 16 chop-floor.	+\$538 last wk, ½-size ²

NOTES — READ THE NUMBERS HONESTLY (THE “MOST THOROUGH TEST” WINDOWS AREN’T IDENTICAL)

- ¹ **grind** deploys the pure-6.0 threshold-chandelier tonight (loose 3.5·ATR trail to 6R, then a firm 0.5·ATR lock). +\$747 is its best single week; **+\$1,782 over the full 3-week archive, robust 15/15 leave-one-day-out**.
- ² **abs_veto** runs at **base_size 1** (half the others’ 2 lots) for its first live week — figures are engine-truth from the live shadow, so roughly double them for a like-for-like size comparison.
- The three rehab faders (capitulation, rgv_short, exhaustion) are ~3-week archive totals from the gate-rehabilitation battery. All figures are in-sample, one summer **RANGE** regime — a trend week could look very different.
- The design idea:** every gate is filtered to bleed less, not catch more — the ATR/ER floors and the 55 s veto keep each gate out of the conditions where it loses. That’s why the tested P&Ls are net-positive despite low win rates: the edge is in not trading the wrong tape.
